EARTH FILLING FEE: \_\_\_\_\_ 000-51699(903)

CODE ENFORCEMENT OFFICER \_\_\_\_\_ DATE: \_\_\_\_\_

## **EARTH FILLING EROSION CONTROL STANDARDS**

1. Applicant shall install an erosion control barrier between disturbed areas and any natural or man-made watercourse or drainage way unless specifically exempted by the Code Enforcement Officer. Additional barriers at property lines, etc. may be required as directed.

The erosion control barrier shall be (in order of preference)

- a. Silt fence, or
  - b. Staked hay bales, or
  - c. Other barriers as approved by the Code Enforcement Officer.
2. Fill sites shall be graded and seeded within thirty (30) calendar days of their closure.
  3. Mulch or other temporary erosion control measures shall be maintained until the site is permanently stabilized with vegetation or other permanent control measures.
  4. Where mulch is used, it shall be applied at a rate of at least one (1) bale per five hundred (500) square feet and shall be maintained until a catch of vegetation is established.
  5. In addition to placement of rip-rap, sod, erosion control blankets or mulch, additional steps shall be taken where necessary, in order to prevent sedimentation of the water. Evidence of sedimentation includes visible gully erosion, discoloration of water by suspended particles and slumping of banks. Silt fences, staked hay bales and other sedimentation control measures, where planned for, shall be in place prior to commencement of work, but shall also be installed whenever necessary due to sedimentation.
  6. Earth filling: the placement of clean soil material, rocks, bricks, or cured concrete that is not mixed with other solid or liquid waste and is not derived from an ore mining activity, in a different location from that where the material was removed.
  7. Trees and or stumps are not permitted with-in earth filling sites.
